PARTNER PROFILE: SECURITY CONTROL SYSTEMS, INC.

In the 1980s, the revolution was televised on MTV, home computing became a reality and the VCR was considered cutting edge technology. The 1980s were also a time of innovative ideas, creativity and new business ventures, including that of Security Control Systems, Inc.

Security Control Systems (SCS) was born in 1983 in Houston, Texas, at a time when security systems integration was still in its infancy. From the very beginning, SCS's specialty was large-scale and complex physical security projects, which was a major differentiator for the company at the time and helped grow the business in its early days.

Today, SCS is a major supplier of integrated electronic security and control systems for commercial and industrial applications throughout the Southwest. Headquartered in Houston, Texas, and with a branch office in Dallas, SCS continues to concentrate on high-level integration, including the development of custom integrations for customers when needed.

Since its early days in the '80s, SCS has expanded its service offerings significantly to specialize in complex electronic control systems that incorporate integrations between two or more of physical security subsystems, delivering one complete, easy to operate package to customers. SCS now also offers dedicated, on-site technical and administrative personnel staffing, effectively allowing its customers to outsource security systems management and administration to SCS personnel on a full-time basis.

Highly regarded as one of the top-notch integration companies in the region, SCS is considered an expert-level security systems integrator for the healthcare and utility industries. The company also works with customers in financial services, and in the oil, energy and petro-chemical industries.

The company prides itself on having excellent long term relationships with major vendors and rather than choosing any single manufacturer for all of its projects, selects the products that best meet each client's specific needs. SCS selects the products that it offers to customers on the basis of the manufacturer's reputation for reliability, suitability for a wide variety of applications, and reputation for customer service.

SCS staff receive the highest levels of technical training available, such as Software House, Honeywell Integrated Security and Milestone Systems. In addition to its dedication to advanced technical training, SCS values a safe work environment by maintaining safety certifications and training requirements far in excess of those mandated by clients.
